Sarah Yuzi Sandström

Computer Science student · DevOps, automation and secure delivery

Kauniainen, Finland sarahyuzisandstrom@gmail.com +358 45 102 9420 LinkedIn GitHub Portfolio

Computer Science student who ships software through automated pipelines: GitHub Actions CI that runs 196 tests across three projects, two of them against real PostgreSQL service containers (plus Redis for eLearning), two Django applications deployed with live demos, and scheduled jobs that keep state between runs. I use AI coding assistants daily and review and test everything they produce. Ten years of teaching made me good at helping other people use tools well.

PROJECTS

2026

eLearning Platform: production-oriented Django system

Live demo ↗

Python · Django · DRF · PostgreSQL 16 · Redis 7 · Channels/WebSockets · Daphne (ASGI) · Docker Compose · GitHub Actions · Render · Neon

- CI on every push starts PostgreSQL and Redis service containers, checks for migration drift, runs Django system checks, verifies the production static build and runs all 85 tests.
- Hardened authentication and ownership permissions across HTML, REST and WebSocket boundaries; added liveness and database-readiness endpoints; full Redis/Celery stack runs locally in Docker.

2025–2026

SkillPath: Python REST API with a validated data pipeline

Live demo ↗

Python · Django REST · PostgreSQL 16 · SQLite · ETL · Docker Compose · GitHub Actions · Gunicorn · Render

- GitHub Actions runs 44 tests against a real PostgreSQL 16 service on every push, including tests under production settings; Render deploys only after the checks pass.
- Built an atomic, repeatable ETL load that rejects bad rows; the same code runs on SQLite, PostgreSQL, Docker Compose and the hosted demo, configured by environment variables.

2026

Scheduled pipelines on GitHub Actions

Python · GitHub Actions (cron) · RSS/JSON/HTML adapters · SQLite · Claude API

- **GRC Change Monitor:** weekday pipeline over six official sources that fingerprints items to detect changes and keeps state between runs; 67 deterministic tests.
- **AI digest agent:** daily job with secrets in Actions, least-privilege token, a concurrency guard, timeout and fail-soft handling that commits its state back to the repository.

2026

Security and GRC work

- FridgeReady cloud app designed with EU data residency, row-level security, a STRIDE threat model and incident playbooks
- GRC Ops Lab, a Streamlit reconciliation tool with 35 pytest tests

SKILLS

Programming	Python, SQL, JavaScript; Django, Django REST Framework, pandas, pytest
DevOps & tooling	Git/GitHub, GitHub Actions (CI with service containers, scheduled workflows, secrets, permissions), Docker and Docker Compose; deployments on Render and Vercel; AI-assisted development (Claude Code, Codex); Linux (Ubuntu)
Data	PostgreSQL, SQLite, Redis; ETL; data validation; schema migrations
Security & GRC	Threat modelling (STRIDE), access control, incident response, supplier risk, ISO 27001, GDPR, DORA
Languages	Mandarin (native), English (full professional), Finnish (pre-intermediate), Swedish (elementary)

EDUCATION

2023–2027 — **BSc Computer Science, University of London (Goldsmiths)**, expected 2027. Modules include databases and advanced data techniques, software development, cyber security, machine learning, NLP and mobile development.

2019 — **MA English Studies and Subject Teacher Training**, University of Helsinki

Earlier — **BA English Studies for Teaching**, University of Buckingham, First Class Honours

EXPERIENCE

2022–2024 — **Teacher Assistant, Pilke päiväkodit Oy** · confidential information handling, documentation, coordination

2021–2022 — **Pedagogy Consultant, LingoAce (remote)** · redesigned a reporting workflow, cutting teacher reporting time by about 70%

Earlier — **Teacher, 10+ years** · teaching, programme coordination, mentoring and multicultural communication
